Architecture

Assessment and Design

Architecture Assessment and Design

Fiorano Architecture Assessment and Design (FAAD) services are structured with our rich knowledge base of over 500 successful project deployments across the globe. While encompassing system and application architecture, it not only reviews the existing IT Landscape but also helps design a robust architecture.

Prior to any solution implementation on the Fiorano platform, the application processes (also known as "Event Processes") are designed to map the business requirements properly. It also provides an opportunity to learn several 'best practices' to increase productivity through Fiorano experts. FAAD's key activities involve requirement gathering and architecture design phases adhering to project management Institute guidelines.

Key Activities

- Understand existing IT application landscape and architecture
- Understand various interface mechanisms available for each of the applications
- Discuss technical performance requirements and thresholds
- Identify relevant Fiorano adaptors
- Design enterprise architecture to optimally achieve desired objectives.
- Discuss deployment topology

Key Benefits

- **Requirement Understanding**

  Clarifies system requirements & reviews system architecture and documentation for offering solution to meet requirements
- **Risk Identification**

  Documents architectural decisions & identifies risks in the early stage of the project life-cycle
- **Stakeholder Communication**

  Improves communication between stakeholders

Requirements

Engagement model : Time and Material

Delivery mode : Onsite engagement

Resources recommended: Enterprise Architect

About Fiorano

Established in Silicon Valley in 1995, Fiorano is a global leader in high-performance hybrid integration, API Management enabling interoperability, agility, profitability and new revenue streams.
